

JAVELIN BST BASIC SKILLS TRAINER

Safe, Effective Training for the Javelin Anti-Tank Missile Forces

Cubic is a proud supplier of Basic Skills Trainers and student and instructor stations for the Javelin Field Tactical Trainer.

Cubic's Basic Skills Trainer provides critical classroom training for Javelin, the world's first man-portable fire-and-forget medium-range missile system. The Javelin trainers teach military gunners how to effectively operate the missile system in a safe, realistic environment.

To date, Cubic has produced over 1,800 Javelin devices as part of the Raytheon-Lockheed Martin Javelin Joint Venture.

Javelin Field Tactical Trainer.....

The Javelin Field Tactical Trainer includes a Command Launch Unit (CLU) and a directed MILES laser capable of MILES pairing – recording a near miss, hit or kill – up to 3,000 meters on the training range or in force-on-force scenarios. The laser is directed by the system tracker after lock-on.

Javelin Basic Skills Trainer.....

The Basic Skills Trainers provide critical training in the classroom, garrison, or aboard ship for:

- Field surveillance
- Target identification, location, and acquisition
- Fire mission control

The trainer features preprogrammed training scenarios that are available through a color LCD display embedded in the simulated CLU. Operational switches and controls perform exactly like the actual equipment.

The training system features preprogrammed video training scenarios delivered to a simulated CLU. Terrain and targets are viewed in day, night and IR conditions, simulating the operation of the weapon system.

As the student moves to survey the terrain, the system senses his movement and adjusts the video image to present a "live" view.

Safe, repeatable training

Cost effective
