# TAKTICS

Tactical Assault Kit – Timely Imagery Content Service

TAKTICS is CDI's commercial software that provides a web-based hub for viewing and downloading tactical data sets, including data formatted for ATAK. TAKTICS is a joint capability hosted by NGA and the TAK Program Office to deliver users with the ability to rapidly search, discover, view and stream or download imagery, elevation data and 3D content from Commercial and Tactical sensors directly to WinTAK and ATAK devices.

TAKTICS provides superior situational awareness, mission planning, rehearsal and precision targeting GEOINT data. Hosted on the unclassified Gov Cloud outside of NGA firewalls and accessible through a thin-client web browser, TAKTICS is easily accessible, providing critical GEOINT to the Warfighter and supporting a GEOINT sharing initiative between SOF Digital Applications, the TAK Product Center and the NGA.

RAPID VISUAL SEARCH AND DISCOVERY
